Building Florida's First AI Degree Program

By [Rhea Kelly](#) | 06/24/24

The [Campus Technology Insider](#) podcast explores current trends and issues impacting technology leaders in higher education. Listen in as Editor in Chief Rhea Kelly chats with ed tech experts and practitioners about their work, ideas and experiences.

Miami Dade College recently announced the launch of a new bachelor's degree in applied artificial intelligence — the first such degree in the state of

Florida and one of the first in the country. At the heart of MDC's approach is the conviction that education in artificial intelligence is for everyone — people at all levels need understand how to apply AI in their lives and careers. We spoke with Antonio Delgado, vice president of innovation and technology partnerships at Miami Dade College, about how the degree program was developed, the foundational AI skills that students need to succeed, and creating spaces that bring people together around AI.
